

Data Science Capstone Project

Part of Coursera IBM Applied Data Science Capstone

Opening a Supermarket in Los Angeles, California

By: Saurav Arun Nair
22nd May 2020

Data Description:

As per the course, we can gather venue Data from Foursquare to analyse for supermarkets in each neighbourhood and make an informed decision as to where it would be efficient to open a new Supermarket. Neighbourhood data for Los Angeles is collected from Wikipedia from the Wikipedia through the below link. Using this data we will see which neighbourhood suits best to open a new supermarket. Further, we will use Data from Foursquare to get nearby venues details of the neighbourhoods gathered from the Wikipedia page.
